

AGISTIX REPORTS SERVICE

The Agistix Reports Service provides robust, self-service data analysis and reporting. Power and non-power users can gain insight into their logistics business with real-time analysis of Financial and Statistical transportation data through dozens of standard reports, plus an unlimited number of customized reports and data views.

Turning raw data into actionable, real-time information

Today's global transportation environment forces companies to use multiple heavy freight and small package carriers to maintain optimal supply chain velocity and flexibility. The fact is, companies require multiple freight carriers to handle their domestic and international suppliers, plus another set of freight carriers for domestic and export customer fulfillment flows.

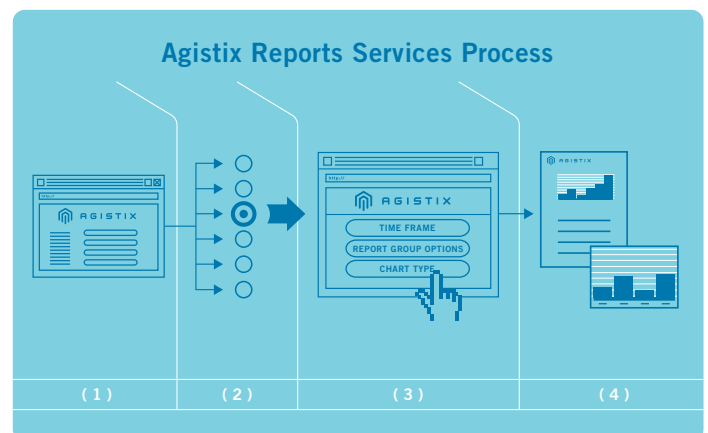

Your logistics organization is being flooded by a seemingly endless stream of raw data in the form of carrier invoices and related documents. To increase your pain point further, this evolving flow of data arrives in disparate formats, is inconsistently labeled, and is generally unusable without extensive data cleansing, standardization, formatting, and maintenance.

Comprehensive information delivery to monitor logistics cost control measures

Agistix Reports Service solves the complex challenge by sifting through all the raw data—quickly, easily and in real-time. This Agistix comprehensive information delivery and analysis solution is designed for your global logistics environment. With it, any **authorized** user can proactively monitor key logistics activities through a series of dynamic, user-designed reports.

Executives can monitor a few important indicators to ensure a smooth business strategy execution while tactical users can utilize the Agistix Reports to monitor operational business processes and cut rising logistics costs. These bird's eye views are available through a dashboard portal offering pre-set graphs and reports, accompanied by a drill-down capability that provides visibility to the shipment level detail.

The Agistix Reports Service draws upon a database of over 100 data elements for each shipment. From this standardized data repository, users can access dozens of standard data reports and a virtually unlimited number of customized reports to provide data views from every possible perspective. By deploying this service, companies can monitor global logistics key performance indicators in real-time and perform trend analysis at the discrete level needed to support all of your internal needs.

- (1) Log on to the Agistix platform from your desktop and select Reports.
- (2) Select the type of Report requested from the six available categories.
- (3) From within those six primary options, select time frame, report group options and chart type.
- (4) View generated report and drill down into highlighted section of reports.

Agistix Technology Platform FEATURES

Dozens of Standard Reports

Creating real-time reports is now easier than ever with dozens of standard report templates to provide real-time visibility into global shipment activities.

- These standard reports include: Shipment Data, Cost Center, Destination, Group, Location, and Transportation Spend
- Multiple Time Frames include: Today, Week-to-Date, Month-to-Date, Year-to-Date to let you run your business the way you choose
- Group Report Options include: User, Vendor, Service Level, Shipment Type, and Destination

Custom Report Capabilities

Customize your reports with maximum flexibility to better track performance metrics manage logistics costs.

- User specified reports available from over one hundred shipment level data elements
- Customized reports to monitor company specific metrics; i.e. freight cost per case

Actionable Information

Gain access to real-time reports in a centralized data repository automatically created by the Agistix web-based platform.

- Multiple export formats provide end users with reports in the format they prefer
- Available formats include: Rich Text Format (RTF), Microsoft Word (RTF), Adobe Acrobat (PDF), and Microsoft Excel (XLS)

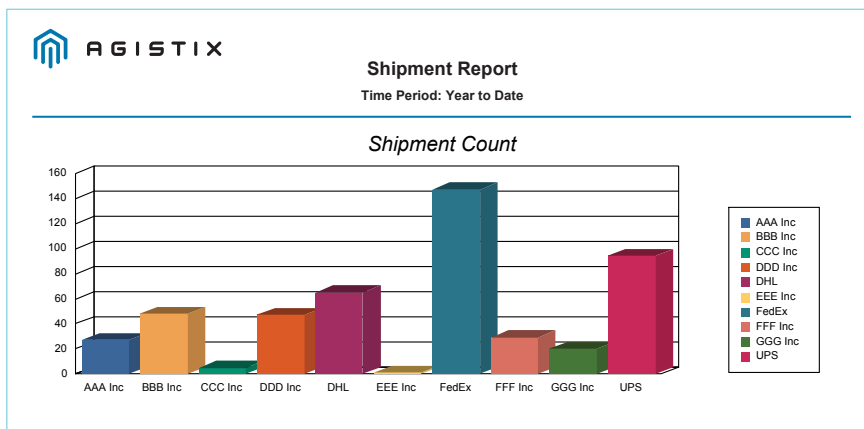

Drill-Down on Data

Any authorized user can have a drill-down capability to provide enhanced visibility.

- Allows users to drill down on relational data to the shipment detail level

BENEFITS

- Enable better data visibility into your company's freight spend
- Get enhanced business and trend analysis to make more informed logistics decisions
- Acquire improved control and management of each carrier's performance

Attain real-time reports that give you visibility into each vendor including number of shipments, total freight charges, and average costs to better assess and control your logistics environment.

About the Agistix Technology Platform

The Agistix technology platform was designed by real users who understand the complex challenges of global shipping. This web-based platform provides a centralized data entry process for managing all domestic and international shipments. Features include:

Single-input format for standardized processing

- Provides rules-driven shipment processing environment
- Eliminates manual preparation and quoting processes for shipments
- Enforces company rules for shipping and carrier selection
- Streamlines management of complex international billing scenarios
- Simplifies compliance with U.S. Export regulations

Secure, centralized storage for all shipping data

- Creates a consolidated, comprehensive repository of data for all carriers and modes
- Stores shipping data and document images in digital format off-site

Immediate access through desktop browser

- Eliminates costs and time associated with system set-up
- Enables training of new users in less than 45 minutes
- Reinforces best practice workflow with intuitive data entry

Advanced shipment manager capabilities

- Sorts and searches historical data by shipment status, customer reference number, tracking number or shipment date
- Enables instant distribution of shipping documents via e-mail or fax
