

AGISTIX TECHNOLOGY PLATFORM

The Agistix Technology Platform is a global shipment processing environment that enables users to process any size or weight shipment from the same input screens. Shipment data automatically populates a centralized data repository providing complete historical information for record keeping and management analysis purposes.

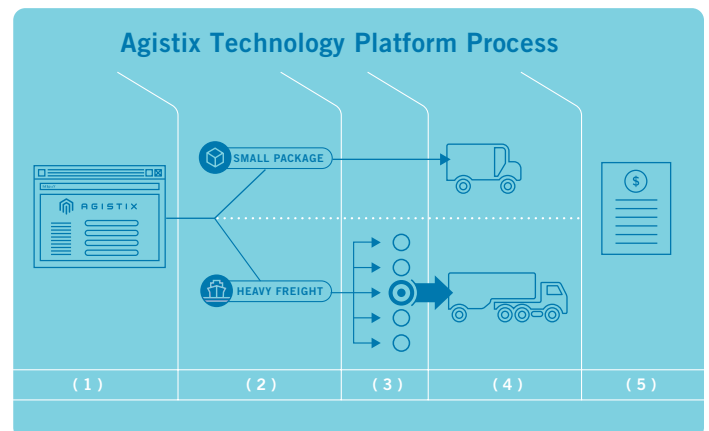

Centralized, rules-based processing for global shipments

The Agistix technology platform was designed by real users who understand the complex, daily challenges of global shipping. For the first time ever, this web-based platform offers businesses like yours a truly centralized data entry process for managing all domestic and international shipments. Our rules-based processing environment lets you customize user settings that conform with your company's preferred business rules. You specify user permissions in advance, so routing guidelines and cost containment measures are enforced at the most crucial decision point: each user's desktop.

Real-time visibility, dramatic cost savings

The Agistix technology platform is the foundation for the powerful, web-based solutions created by Agistix for processing of Heavy Freight and Small Package shipments. This rules-based environment provides enterprise-wide control for all carrier service levels. Use the Heavy Freight solution to instantly access the low-cost daily spot market for air freight, LTL (less than truckload), full truckloads, LCL (less than container load) and full container loads. Just complete a standardized online form, and our proprietary dynamic bidding platform lets you request spot quotes from multiple, pre-screened carriers with a single keystroke. You select the carrier that offers the most value, and all documentation is automatically generated and stored online. Our Small Package solution reins in costs by ensuring that users only have access to authorized shipping options for vendors, continually enforced through centralized, rules-based shipping processes. To close the processing loop, Agistix provides a weekly electronic invoice that consolidates all transportation vendor billing. With the Agistix platform and solutions, you achieve real-time visibility and control for all shipping processes coupled with dramatic cost savings.

- (1) Log on to the Agistix platform from your desktop and select either Small Package Service, or Heavy Freight Service for Air Freight, LTL, Truckload or Ocean Freight.
- (2) Click on the Small Package icon to instantly price and schedule shipments up to 150 pounds. Select Heavy Freight to complete a bid request for anything heavier.
- (3) Small package labels are generated for each shipment, Heavy Freight shipments can be sent to bid by any of the pre-qualified vendors or a freight carrier can be selected from your pre-determined list.
- (4) Vendors compete to win your Heavy Freight business by completing online forms so you always receive bid responses in a standard format. Just choose a carrier, and your shipment is sent by land, sea or air, to or from anywhere in the world.
- (5) With our Invoice Consolidation Service, all details are fully documented on a weekly electronic invoice for both Small Package and Heavy Freight service, virtually eliminating accounts payable paperwork.

What our Customers are Saying

“ Agistix enabled our company to reduce shipping costs by more than 28 percent in less than three months. Our shareholders, customers and suppliers are all extremely impressed. I believe that any company seeking to gain leverage in the global shipping marketplace should look first to Agistix.”

Sam Berman, Director of Global Logistics
Maxim Integrated Products

“ Before we found Agistix, our shipping costs were out of control. Now, we are realizing across-the-board cost savings of 35 percent – impressive by any standards, but especially important for a start-up company like ours.”

Thomas Varghese, President
Bharosa, Inc

Agistix Technology Platform FEATURES AND BENEFITS

Single-input format for standardized processing

- Provides sophisticated rules-driven shipment processing environment
- Eliminates manual shipment quoting processes via phone, fax, e-mail, etc.
- Automatically enforces company rules for shipping and carrier selection
- Streamlines management of complex international billing scenarios

Secure, centralized storage for all shipping data

- Creates a consolidated, comprehensive repository of data for all carriers and modes
- Provides authorized users with “read-only” access to company address book
- Stores all shipping transaction data and document images in digital format off-site
- Provides web site security certified by TRUSTe, an independent auditor.

Immediate access through desktop browser

- Eliminates costs and time associated with integration and set-up
- Reinforces best practice workflow with intuitive data entry processes
- Reduces average training time for new users to less than 45 minutes

Advanced shipment manager capabilities

- Sorts and searches historical data by shipment status, customer reference number, tracking number or shipment date
- Enables instant distribution of shipping documents via e-mail or fax

Simplifies compliance with U.S. Export regulations

- Prompts users for applicable U.S. Export regulatory requirements, i.e. Harmonized System number (HS#), Export Control Classification Number (ECCN#) and export license details
